ParkMyCar

Find parking. Finish the journey.

Search • Compare • Get directions

Parking discovery for the whole trip.

Finding parking is only half the decision

Before arriving, drivers need to know:

Can I use this parking?

Vehicle fit, opening hours and access rules

Which option suits my trip?

Compare distance, known prices and features

How current are the details?

Check the source, update time and corrections

ParkMyCar brings these checks into one parking shortlist.

India context: NDMC parking facilities and BMRCL Metro Parking Policy (2026)

From destination to parking in four steps

1

Search your destination

City, neighbourhood, village or landmark

2

Filter parking options

Vehicle, radius, parking type and features

Arrival time

Planned stay

3

Compare up to 3

Access details, sources and distance

4

Open directions

Drive to parking.
Walk to your destination.

A shortlist you can actually use

Choose a destination

Keep up to 3 options

Driving and walking directions

Compare parking details, sources and straight-line distance

Parking around your destination

Find a destination. See nearby parking. Get directions.

1 Search a destination

Palika Bazaar
Connaught Place, New Delhi

PARKING THAT PUTS YOU AHEAD

More context. Better parking choices.

Traceable details

See where parking information comes from.

Useful comparison

Keep up to three options side by side.

Reviewed updates

Reports carry timing and go through review.

Destination

Parking entrance

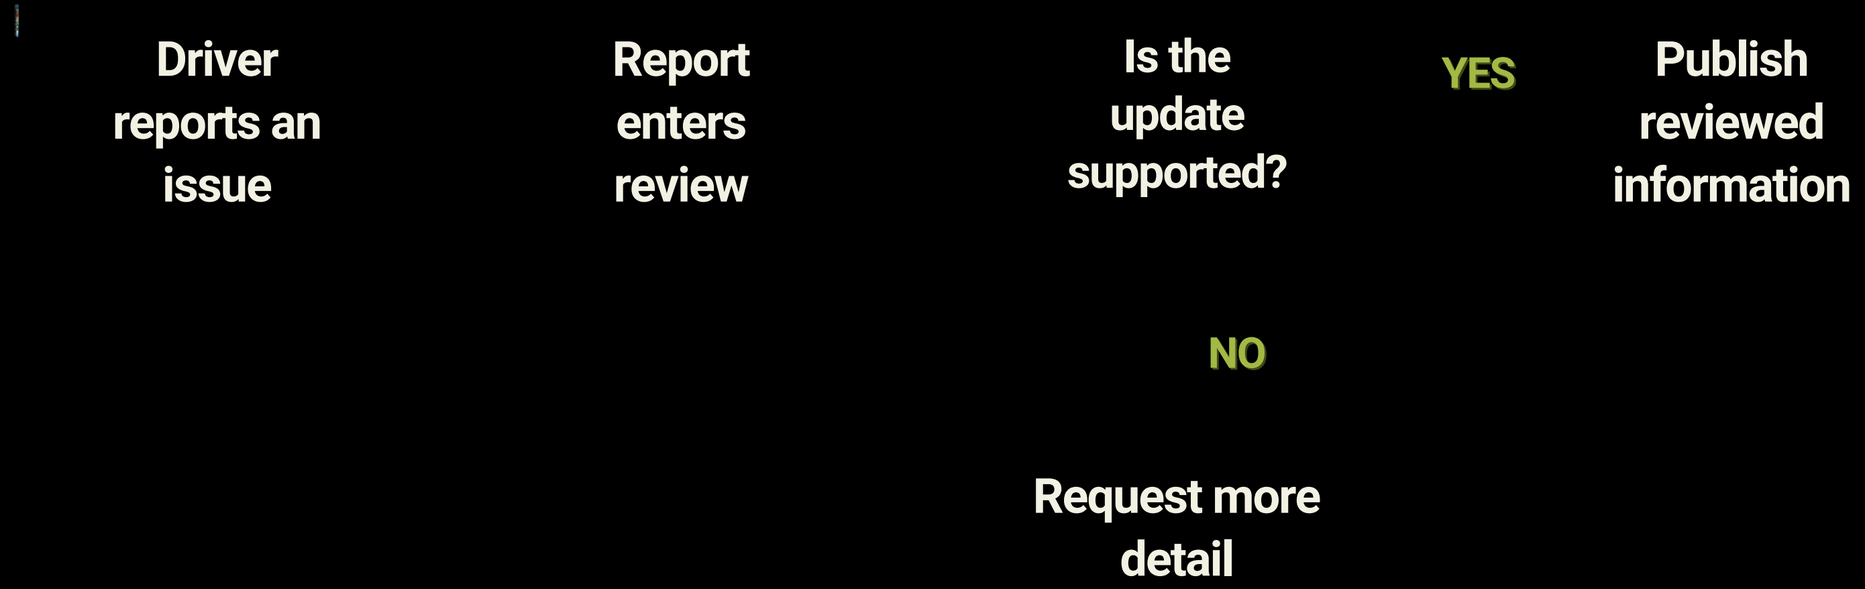

Final walk

How a parking update reaches drivers

Time-sensitive reports expire so old information is not treated as current.

REPORT TYPES

- Parking full
- Access issue
- Incorrect details

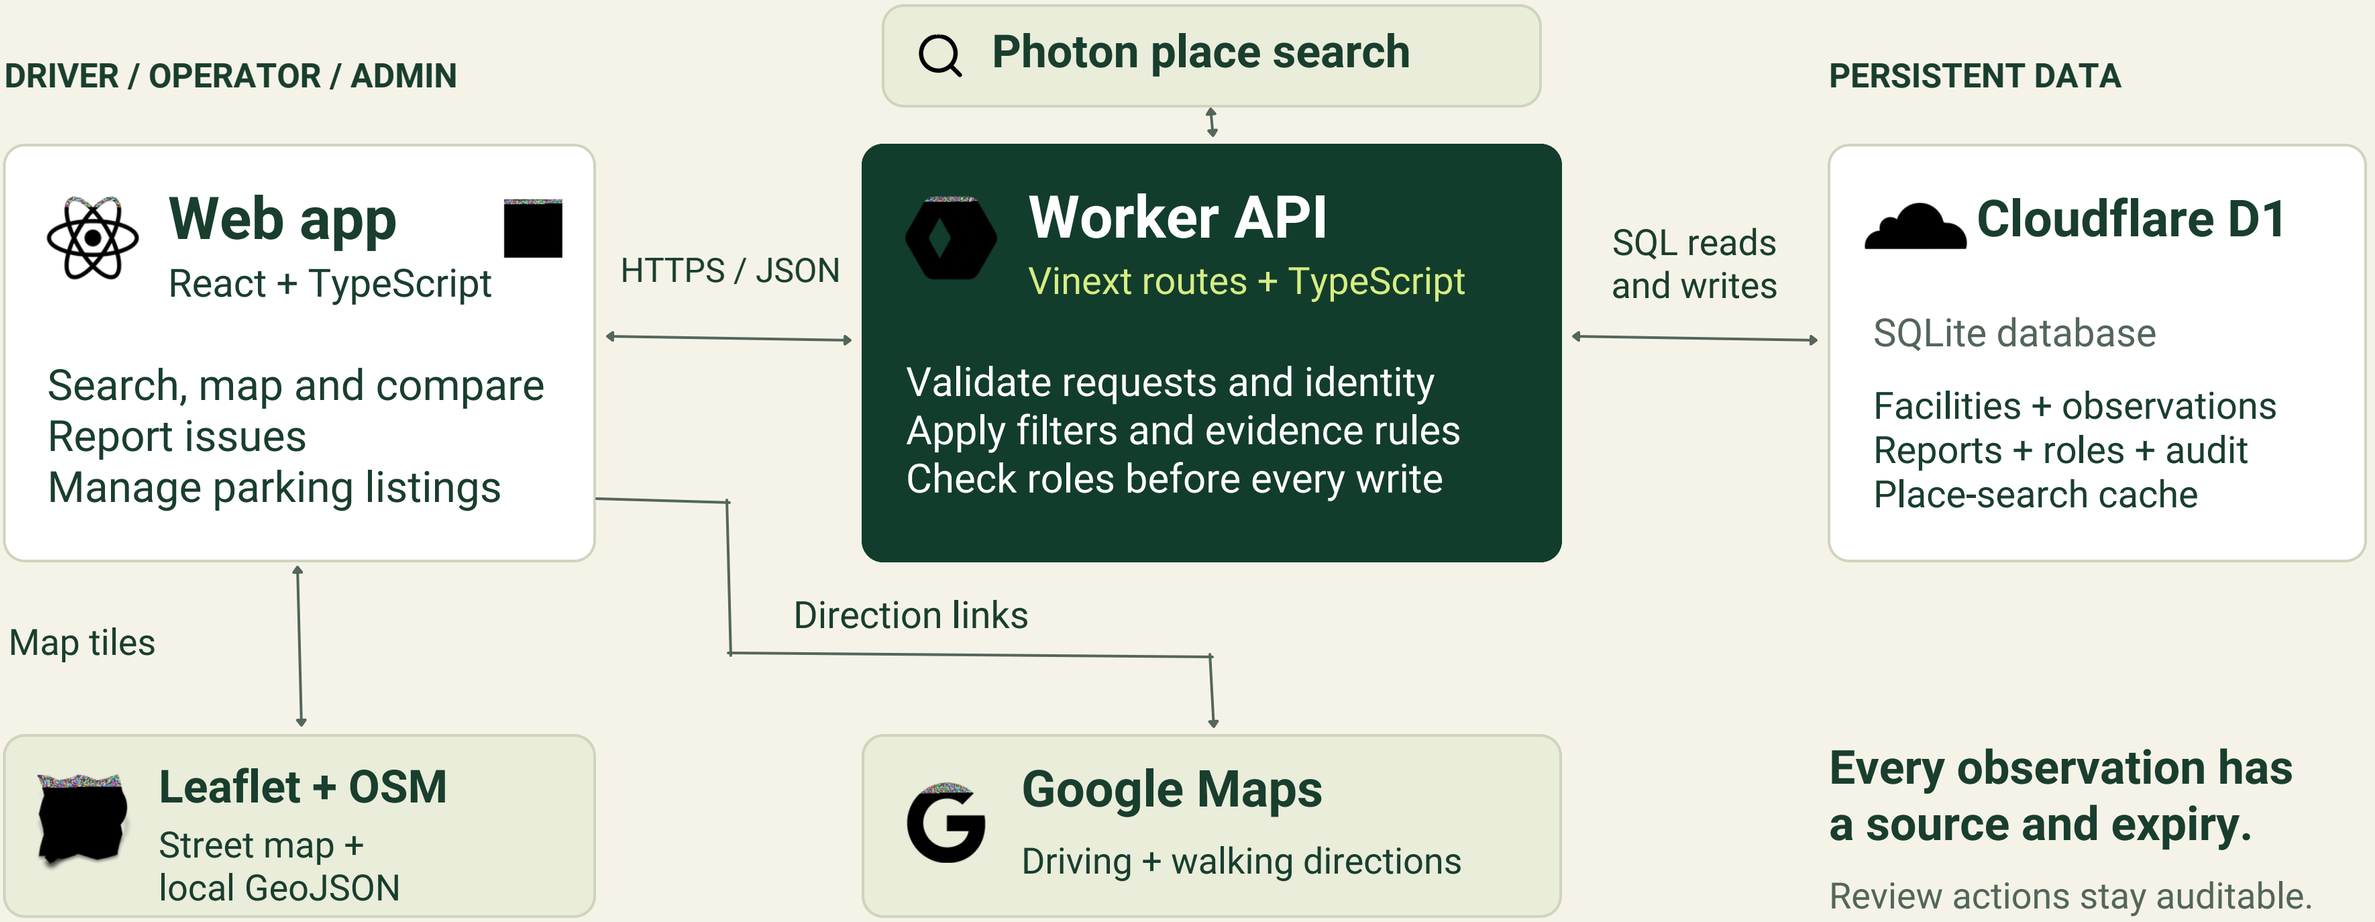

Who reported it
the source of the report

When it was reported
the time it was submitted

When it expires
the time it is no longer current

Technical architecture

A traceable flow from place search to parking choice

Every observation has a source and expiry.

Review actions stay auditable.

Implementation: ParkMyCar architecture and API source

Drivers, operators and admins each have a clear role

DRIVER

- Search and compare
- Save a shortlist
- Report an issue

OPERATOR

- Maintain assigned locations
- Update parking details

ADMIN

- Review listings and reports
- Manage team permissions
- Inspect audit history

Operators work only on assigned locations.

National place search. Focused parking coverage.

Place search across India

Cities, towns, villages and landmarks

Choose the matching state and area

Current parking catalogue

5

sourced facilities in
Connaught Place, New Delhi

Civic directories + OpenStreetMap + reviewed reports

Next data integrations

Operator APIs and IoT feeds, where available

POSITIONING

Why ParkMyCar if Google Maps already shows parking?

Driver need	Google Maps	ParkMyCar
Find a place	Places, reviews and maps	Destination search with parking filters for vehicle, access and features
Choose parking	Explore places and saved lists	Compare up to three parking options with the same fields
Check the details	Community and business contributions	Source links, checked dates and reviewed facility corrections
Get there	Driving and walking routes	Choose parking, then open the route in Google Maps

ParkMyCar helps choose a primary and backup option. Google Maps handles navigation.

A phased path to wider adoption

Expansion follows field evidence, operator participation and measured reliability

01

CURRENT FOUNDATION

The working app

India place search
Five sourced parking areas
Comparison and review tools

Working foundation for
a field pilot

02

NEXT: FIELD PILOT

Trusted local data

Survey entrances and bays.
Confirm rules and prices.
Onboard local operators.

Release gate
Each listing has a source
and accountable owner.

03

THEN: LIVE OPERATIONS

Capacity + vacancy

Connect operator APIs,
gates or bay sensors.
Audit counts on site.

Release gate
Freshness and count accuracy
meet agreed pilot targets.

04

THEN: CITY EXPANSION

Reliable scale

PostGIS spatial search
Scale search and languages.
Expand surveyed coverage.

Release gate
Arrival success and
repeat use improve.

Advantage to build: accurate entrances, accountable operators and fresh parking data.

Measure correct-entry arrivals, time to choose, fresh-data coverage and repeat use.

Parking capacity and live availability

Three data flows, each tied to a surveyed facility and a source

AREA AND CAPACITY

Surveyed site boundary + marked-bay audit	Measure area and count bays Group bays by vehicle type	**Parking area in m²** **Total marked bays**

UNLISTED PARKING

Municipal and OSM records + operator / field surveys	Match and deduplicate sites Review new facilities	**Count of unlisted sites and their parking slots**

OCCUPIED AND FREE SLOTS

Operator APIs, gate counts or bay sensors	Validate source and time Reconcile counts, expire data	**Occupied / free / blocked with last-update time**

Free bays = marked bays − occupied − blocked. Calculate separately for each vehicle type.

ParkMyCar

Find a place.
Compare your options.
Continue your journey.
